

Setting up your GigaSpire u4m Mesh to your MTCO u4 Router

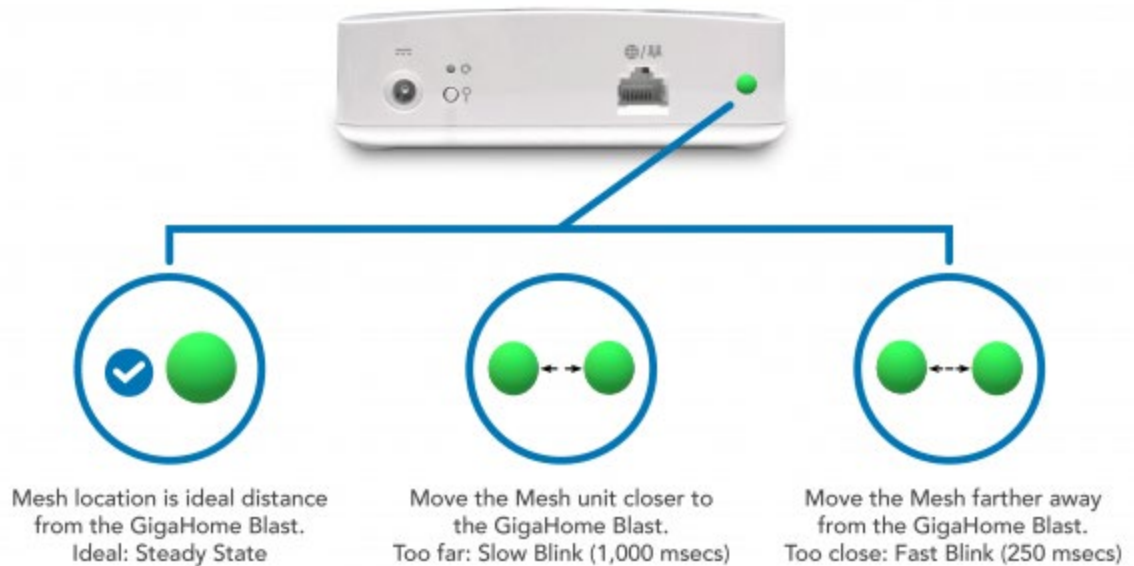

1. **Connect the Mesh unit to a power outlet.** When the LED is flashing red, your u4m Mesh unit is ready to pair with the u4 MTCO Router

2. **Press and hold the WPS buttons** on the Mesh u4m unit and then on the u4 Router for **3 seconds** (less than 30 seconds apart). The LEDs will flash green while attempting to pair.

- Use the solid green LED indicator (displays for 60 seconds at end of pairing cycle) to determine the ideal location for your Mesh unit. If necessary, relocate it to a more ideal distance from your u4 MTCO Router and confirm successful pairing after the Mesh reboots (repeating steps 2-3 as needed).

- Once successful pairing is complete the u4 MTCO Router and u4m Mesh LEDs will both show a Green color. It may take several minutes to reach this state.
