

Setting up your GigaSpire u4m Mesh to your MTCO u6 Router

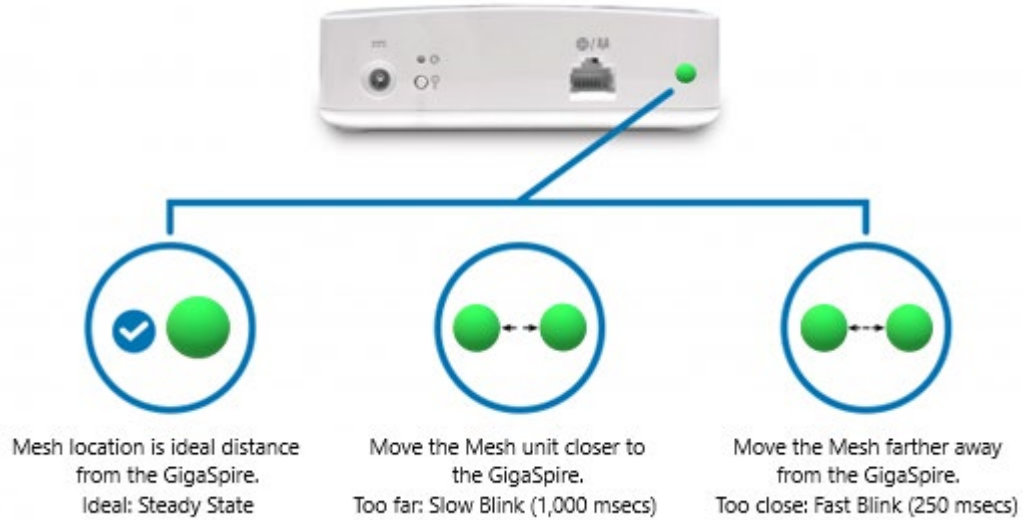

1. **Connect the Mesh unit to a power outlet.** Then, when the LED is flashing red, your Mesh unit is ready to pair with the GigaSpire.

2. **Press and hold the WPS buttons** on the Mesh unit and then on the GigaSpire for **3 seconds** (less than 30 seconds apart). The LEDs will flash green while attempting to pair.

- Use the solid green LED indicator (displays for 60 seconds at the end of the pairing cycle) to determine the ideal location for your Mesh unit. If necessary, relocate it to an ideal distance from your GigaSpire and confirm successful pairing after the Mesh reboots (repeating steps 2-3 as needed).

- Once successful pairing is complete the GigaSpire and Mesh LEDs will both show a Green color. It may take several minutes to reach this state.
