

How Do I Check My Apple TV Connection?

1. Open the **Settings** app on your Apple TV.
2. Scroll down and select **Network**.
3. Here, you will see all the details of the connected Wi-Fi network, including the **Signal Strength**, with five dots indicating the strongest signal.

Usually, the first step in troubleshooting Wi-Fi issues that might be plaguing your Apple TV entails determining whether the Apple TV has enough Wi-Fi signal strength. This is important because the lower the signal, the poorer your experience will be, as you'll struggle with reduced download speeds and poor streaming quality.
